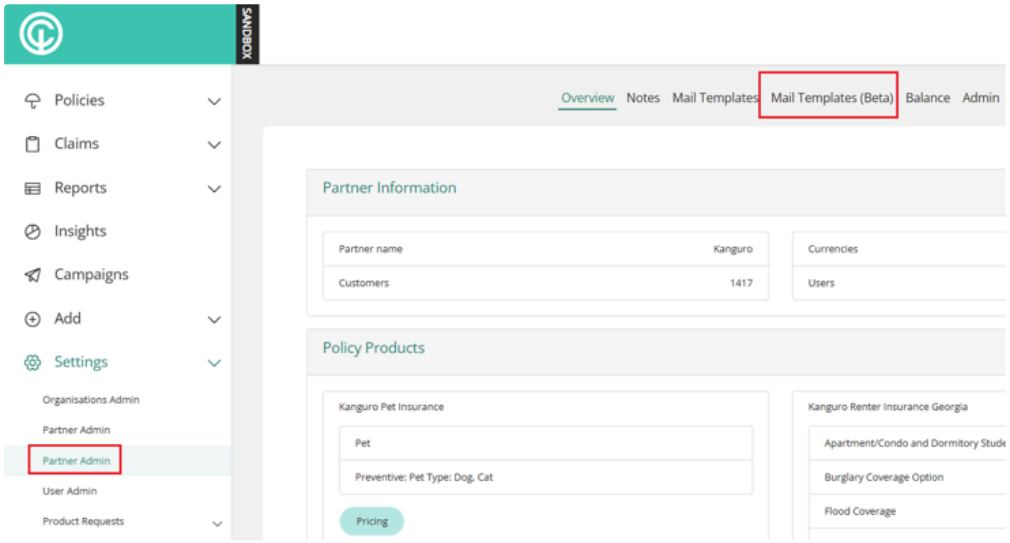
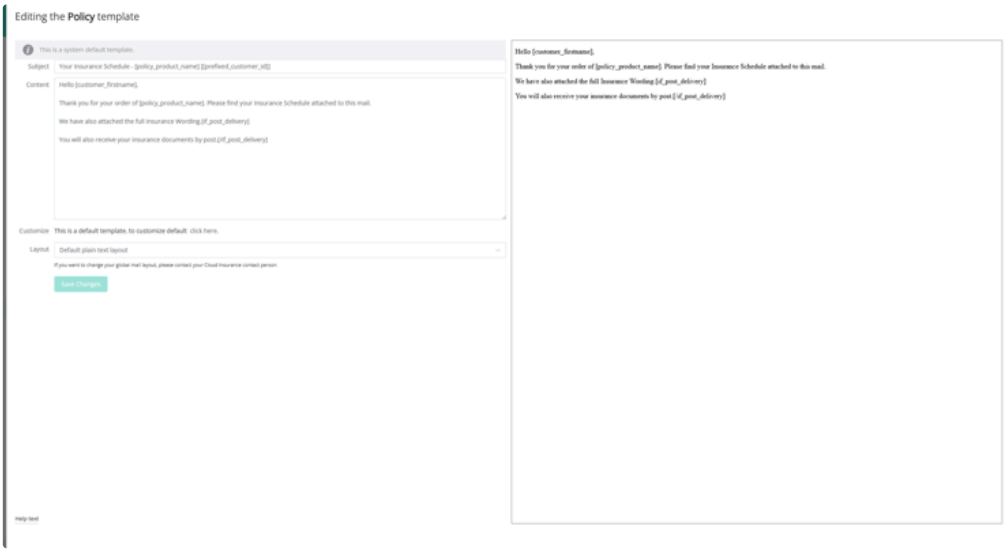
Kanguro: Set Up Email Templates

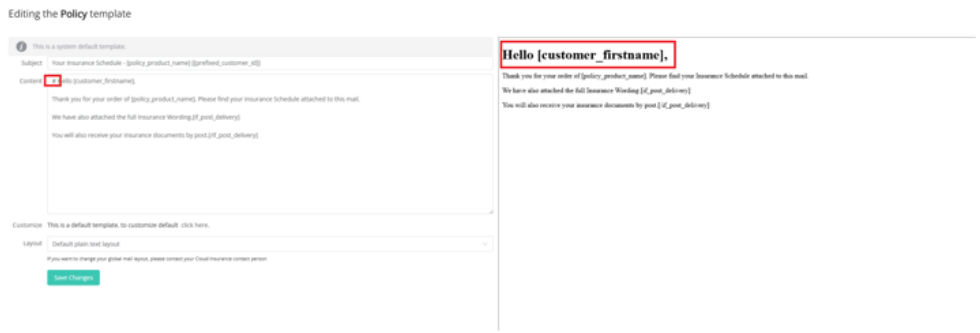
1. Go into Settings → `Partner Admin` (make sure that you enter the lower Partner Admin on Sandbox. On Stage and Prod, there is just one, which is the correct one) → Kanguro Partner Partner →Mail Templates (Beta)
   a. The difference between the Beta and the Regular is that the Beta is the one supporting Markdown. This works just fine, and Beta has not been removed (yet).



2. Here are all the different email templates that CI currently holds and that can be edited
3. Click any template to edit it. On the left is the template, the right is the rendered version what it will look like. This is to verify/check the usage of Markdown correctly
   a. Note that the template is just blank before any `HTML Layout` is implemented. This can be sent to CI when ready to be added to replace the default `HTML Layout`.



4. To add Markdown elements, these pages can be utilised:
   a. Basic Syntax | Markdown Guide
   b. Markdown Cheat Sheet | Markdown Guide
   c. For example, adding a '#' in front of the first line, makes it a header:



5. When the template looks as expected, click “Save Changes”.

Appendix - Which email templates are relevant?

Template	Applicable to Kanguro (True/False)	Automatic (True/False)	Comment
General	T	F	Can be sent out from a handler in the customer communication tab. It's sort of an on demand function to just send some generic email.
Quote	T	T	Quote Email. Automatic when quote is created through API, can also be sent manually in the UI when viewing a quote in CI. In manual case, it can be adapted by the handler.
Order	F	F	Between Offer and Policy. Usually used in UW contexts.
Policy	T	T	Same as quote
Edit	F	F	Always manual, can be edited before sendout. Can be sent out after an edit.
Draft Edit	F	F	Not used, but is for drafting an edit which can be passed to an underwriter for check. Is more for human health insurance where there are huge sums involved.
Policy Renewal	T	T	The email which contains the renewal. Can also be resent manually by a handler if a policy has been renewed.

Policy Renewal Disabled	F	T	There are products where the coverage is not renewed in certain scenarios (e.g. addtl. Insurance in health insurance once the customer is older than a certain age). In this case, this template is being sent out. Is not used by us, but potentially useful un the future.
Policy Cancellation	T	F	Can be sent out manually by handler when cancelling a policy in the UI. Is editable.
Policy Reinstated	T	F	Only sent out manually, can be sent when a policy is being reinstated ("reactivation"). Can be edited before sendout.
Direct Debit Payment File creatred	F	T	Used when a direct debit payment medium is being charged.
Invoice failed, but will retry - insufficient funds	F	T	Stripe specific if a CC has insufficent funds.
Invoice Created	F	T	Applies when payment method is Invoice through provider who offers that
Invoice Failed	T	T	Similar to Invoice failed, but will retry - insufficient funds but for an unknown reason.
Payment Recevied	T	T	Stripe specific, when a payment worked. E.g. "We charged your premium successfully from you credit card".
Autocancellation Notice	T	T	Never manually sent (might be possible to resend, but without the possibility of editing). Is sent after X amount of days to warn about the auto cancellation.
Autocancellation Completed	T	T	See Autocancellation Notice, but now it is not a warning, but an information that the auto cancellation has been performed.
